# *Quality*

**Only the best.**

We want people to sit comfortably. Which is why we produce anatomically perfect furniture that fulfils the highest quality standards – using high grade, easy-care materials. We are so confident of our work that we offer a five-year guarantee on the construction, upholstery materials, functional fittings and workmanship of every piece.

*fulfilling the  
highest requirements*

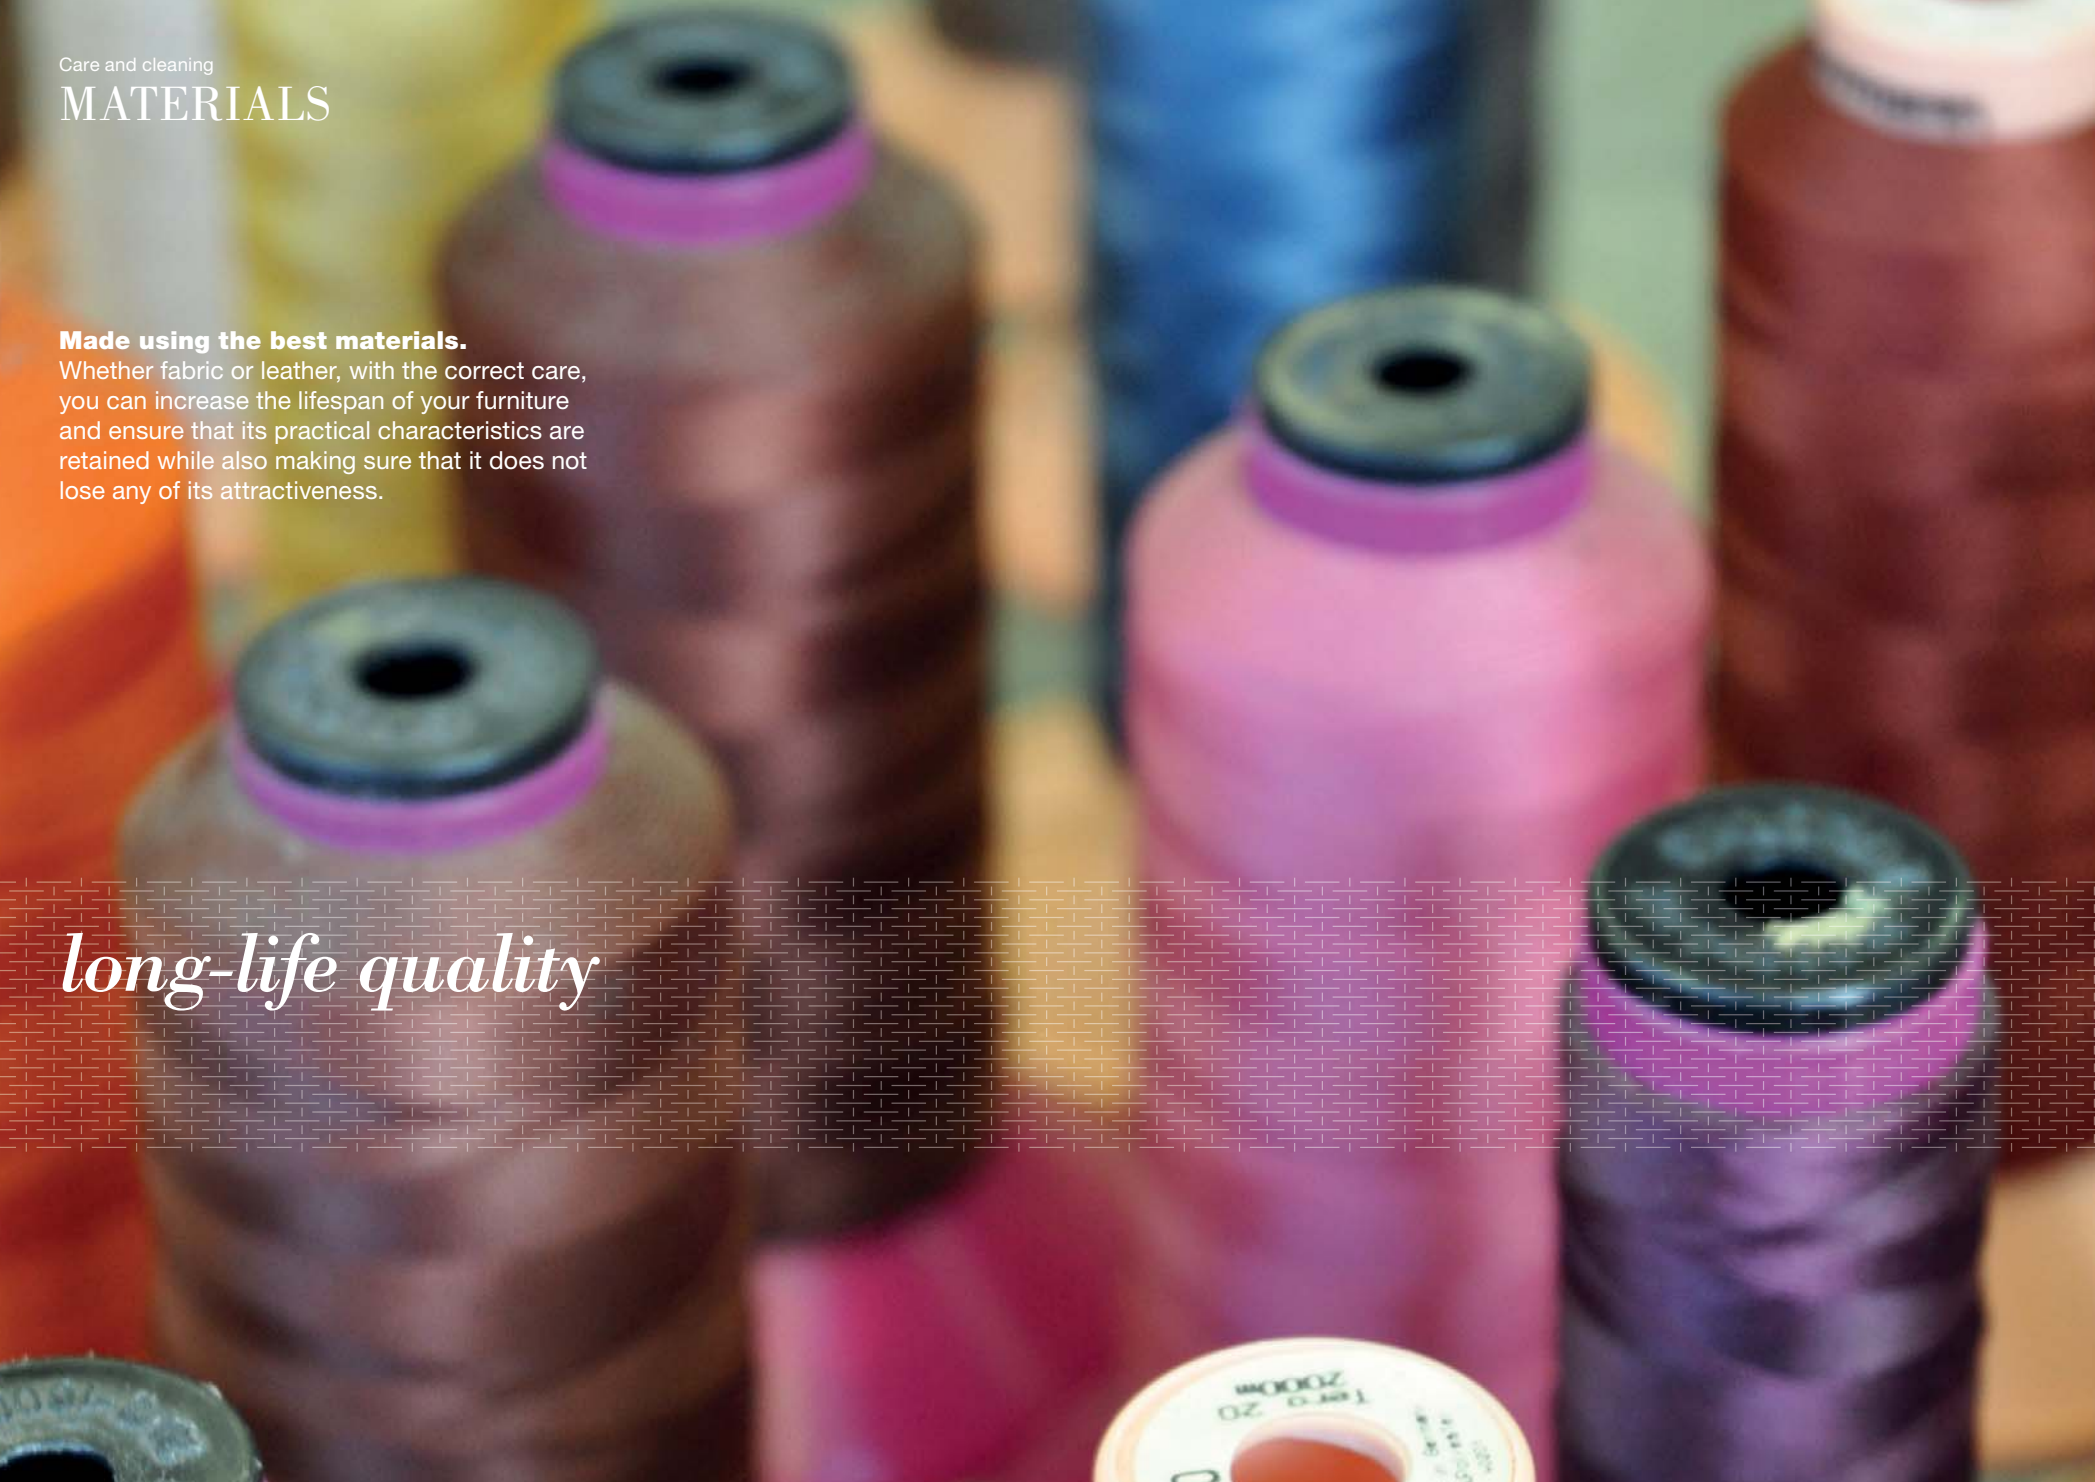

Care and cleaning

## MATERIALS

**Made using the best materials.**

Whether fabric or leather, with the correct care, you can increase the lifespan of your furniture and ensure that its practical characteristics are retained while also making sure that it does not lose any of its attractiveness.

*long-life quality*

## TIPS

### **Sit well and stylishly for a long time.**

New furniture has its own, typical, harmless odour that is quickly lost with good ventilation. The foams used by Intertime are very high density and ensure durable, perfect seating comfort. A certain amount of creasing may occur due to softening of the foam and a noticeable softening of the foam in the beginning is normal. In order to retain a regular appearance, we recommend that all areas of the upholstery be used to the same extent. Regardless of the upholstery material, the following applies: never position furniture directly in front of a source of heat and avoid direct sunlight.

### **Bolsters**

Loose bolsters with flake-filled or feather cushions have fillings that are stitched in separate compartments, which gives them a downy casual look. The covering fabric may wrinkle and the individual compartments may show through. This is a characteristic of high-quality cushions with compartment fillings and not a basis for complaints. These cushions should regularly be plumped up to keep them in perfect shape.

### **Aluminium parts**

The polished aluminium parts may oxidise and this is completely normal for this type of material. Aluminium can especially start to tarnish and lose its polished shine when it comes into contact with skin. This is a characteristic of the unique look of polished aluminium and not a basis for complaints. On request, the aluminium parts can be polished up at the factory.

## ALCANTARA & FABRICS

### **Alcantara**

Alcantara is easy to care for and retains its beauty for a long time with just gentle care using water. Please do not use any chemical cleaning agents and never rub too hard. You can find recommended care methods for certain stains on the Alcantara label.

### **Fabric**

Fabrics need regular care. Our furniture fabrics can be cleaned easily with a vacuum cleaner. The best method is to use a soft brush with a low suction and always vacuum in the direction of the pile. For heavier soiling and stains, we recommend that you use PURATEX textile care in accordance with the instructions. Cleaning agents that you have not used before should be tested on the enclosed sample or a concealed spot of the furniture. After cleaning, let the upholstery dry completely before using again.

Care and cleaning

# LEATHER

**Leather is a high-quality natural product.**

It is made of cowhide and thus manifests the natural signs of an individual being. Insect bites, thorn scratches and injuries leave visible marks which can only be partly concealed in the manufacturing process. These minor traces bear witness to the natural origin. All leathers are pollutant free and eco-friendly – for a healthy living climate and a long life.

*natural origins*

# LEATHER

## Care

Leather is easy to care for and undemanding. Wipe it off every month or two with a moist cloth to preserve the moisture it needs. The leather should be treated with a leather care product once or twice a year. For this purpose we recommend the KERALUX care set. Do not use chemicals or household cleaning agents for cleaning. Protect the leather from intensive, direct sunlight.

## Cleaning

The surface of pigmented leather is impregnated with a special protective finish. Nevertheless, stains on all leather qualities should be dabbed off with an absorbent cloth. Then wipe off the leather surface using a flannel soaked in mild soapy water and well wrung-out. Rinse with clear water and dry with a woollen cloth. Never rub, even in the case of stubborn stains. Cleaning agents whose effect is unknown should first be tested by applying to the enclosed sample or on a concealed area of the upholstery. Please do not use micro-fibre cloths intended for glass cleaning.

## Sierra

Sierra is a dyed and robust cowhide with an even grain pattern. With its protective surface coating the leather is ideally suited to use in public places.

## Rancho

Rancho is a supple cowhide. This dyed leather is made from carefully selected rawhides. Its thickness allows the grain pattern to come to full effect.

## Nevada

Nevada is a soft, semi-aniline leather made from the best rawhides. Its natural origin can be seen and felt with all its random features such as thorn scratches, insect bites and scars. This is an extra soft, easy-care leather with good performance characteristics and excellent breathability.

## Santana

Santana is a full-grain cowhide with an extremely supple, warm and velvety feel. Natural characteristics such as thorn scratches, insect bites and scars are retained to give the leather its characteristic appearance. Santana provides excellent breathability. Avoid direct sunlight.

## Softy

Softy is a full-grain and durable thick leather. Despite its pronounced grain pattern, it remains supple and soft to the touch.

## Anilina

Anilina is a full-grain and untreated aniline cowhide. Its excellent breathability and extremely soft and warm feel give it its distinctive character. It retains its natural characteristics such as scratches from thorns, insect bites and scars, which give the leather its natural look along with its differences in colour and structure. Do not clean with chemicals and avoid direct sunlight.

## Ecopell

Ecopell is a full-grain and untreated, pure vegetable-tanned leather. It boasts excellent breathability properties and it is very soft and warm to the touch. It retains its natural characteristics such as scratches from thorns, insect bites and scars, which give the leather its natural look. Do not clean with chemicals and avoid direct sunlight.

## Velluto

Velluto is a through-dyed, aniline leather that has been given a nubuck effect. Its softness and its special velvety feel give the leather its unmistakable character. All the natural features such as scars, insect bites, etc. are preserved and enhance the natural feel and look of this leather. 3M Scotchgard equipment.
